

Recruitment

- The current number of participants recruited in March was 17 and our overall total now stands at **113 (as of 9th April) – well done all!**
- Top recruiting site for **March** is **Newcastle** with **4** participants. Well done to them.
- Hot on Newcastle's heels, we have Edinburgh, Oxford and Devon & Exeter with 3 each, NHS Borders with 2 and Lanarkshire and Durham & Darlington with 1 each.
- If your site is a large site, we are asking for **4 randomisations a month** and for smaller sites, **2 a month**. Sites hitting the milestone figures (120th, 130th, etc.) will receive tokens of our appreciation. Thank you in advance for your efforts!

Sites

- **2** new sites opened in March – **James Cook University Hospital and Horton Hospital**. We now have **15 sites open** to recruitment - A very warm welcome to all!
- Several new sites have had their SIVs – **University Hospital of North Tees, Southampton General Hospital, Hereford County Hospital**. We look forward to getting you up and running.
- SIVs are in the diary for **Victoria Hospital, Kirkcaldy; Ipswich; Wrightington, Wigan and Leigh; and Worcester**.

FAQs

Q: A participant has been discharged from acute hospital before the Day 3 (2-5) assessments were carried out – is this a deviation?

A: No, this isn't a deviation. The discharge date will be entered in REDCap, so it will be clear that these assessments were not able to be performed due to early discharge. A file note can be used to keep record of this in your ISF.

Q: Do I need to add patients that are pre-consented but not randomised to the main RESULT-Hip database?

A: No – all pre-consented patients should be recorded on the REDCap screening log, but only those who go on to be randomised need to be added to the main database.

Q: If a participant has already had a clinical transfusion are they still eligible for the study?

A: Yes, participants who have had a transfusion may still be randomised to the study granted that their most recent haemoglobin result falls below the trigger of <90g/L.

for Health Research

THANK YOU FOR YOUR CONTINUED SUPPORT!

This study is funded by the National Institute for Health Research (NIHR) Health Technology Assessment (HTA) Programme (14/16/0140). The views expressed are those of the author(s) and not necessarily those of the NIHR or the Department of Health and Social Care.

Site Map

Green – Open
Orange – SIV completed
Blue – SIV pending

We are very pleased to tell you that following our end of pilot NIHR review meeting, the NIHR have agreed that the RESULT Hip trial should continue. They are however very keen that we have opened all **30 sites** by the end of August and that we do everything we can to increase recruitment rate at sites to **2.5 participants per site per month open**.

We have discussed in the recent site teleconference **changing the sampling windows** to a baseline sample and two further samples across the following 5 days which will allow more flexibility to recruit on a Friday, without losing ability to detect secondary outcomes. A substantial amendment to do this is in process. Please do feedback to us any changes which may improve recruitment at your site!

Reminders

- Please enter your **screening logs** on to the database **weekly**.
- **Data queries** will be sent out to sites at the start of every month – please complete these as promptly as you can.
- If you have any **photos** that we can use in future newsletters, please do send them to us!
- We are registered for the **NIHR Associate PI Scheme** – if your site is interested in having an API, please contact us and we can advise on how to proceed.
