

Effectiveness and cost-effectiveness of a digital social intervention for people with troublesome asthma promoted by primary care clinicians (AD-HOC)

Dr Anna De Simoni

Asthma UK Centre
for Applied Research

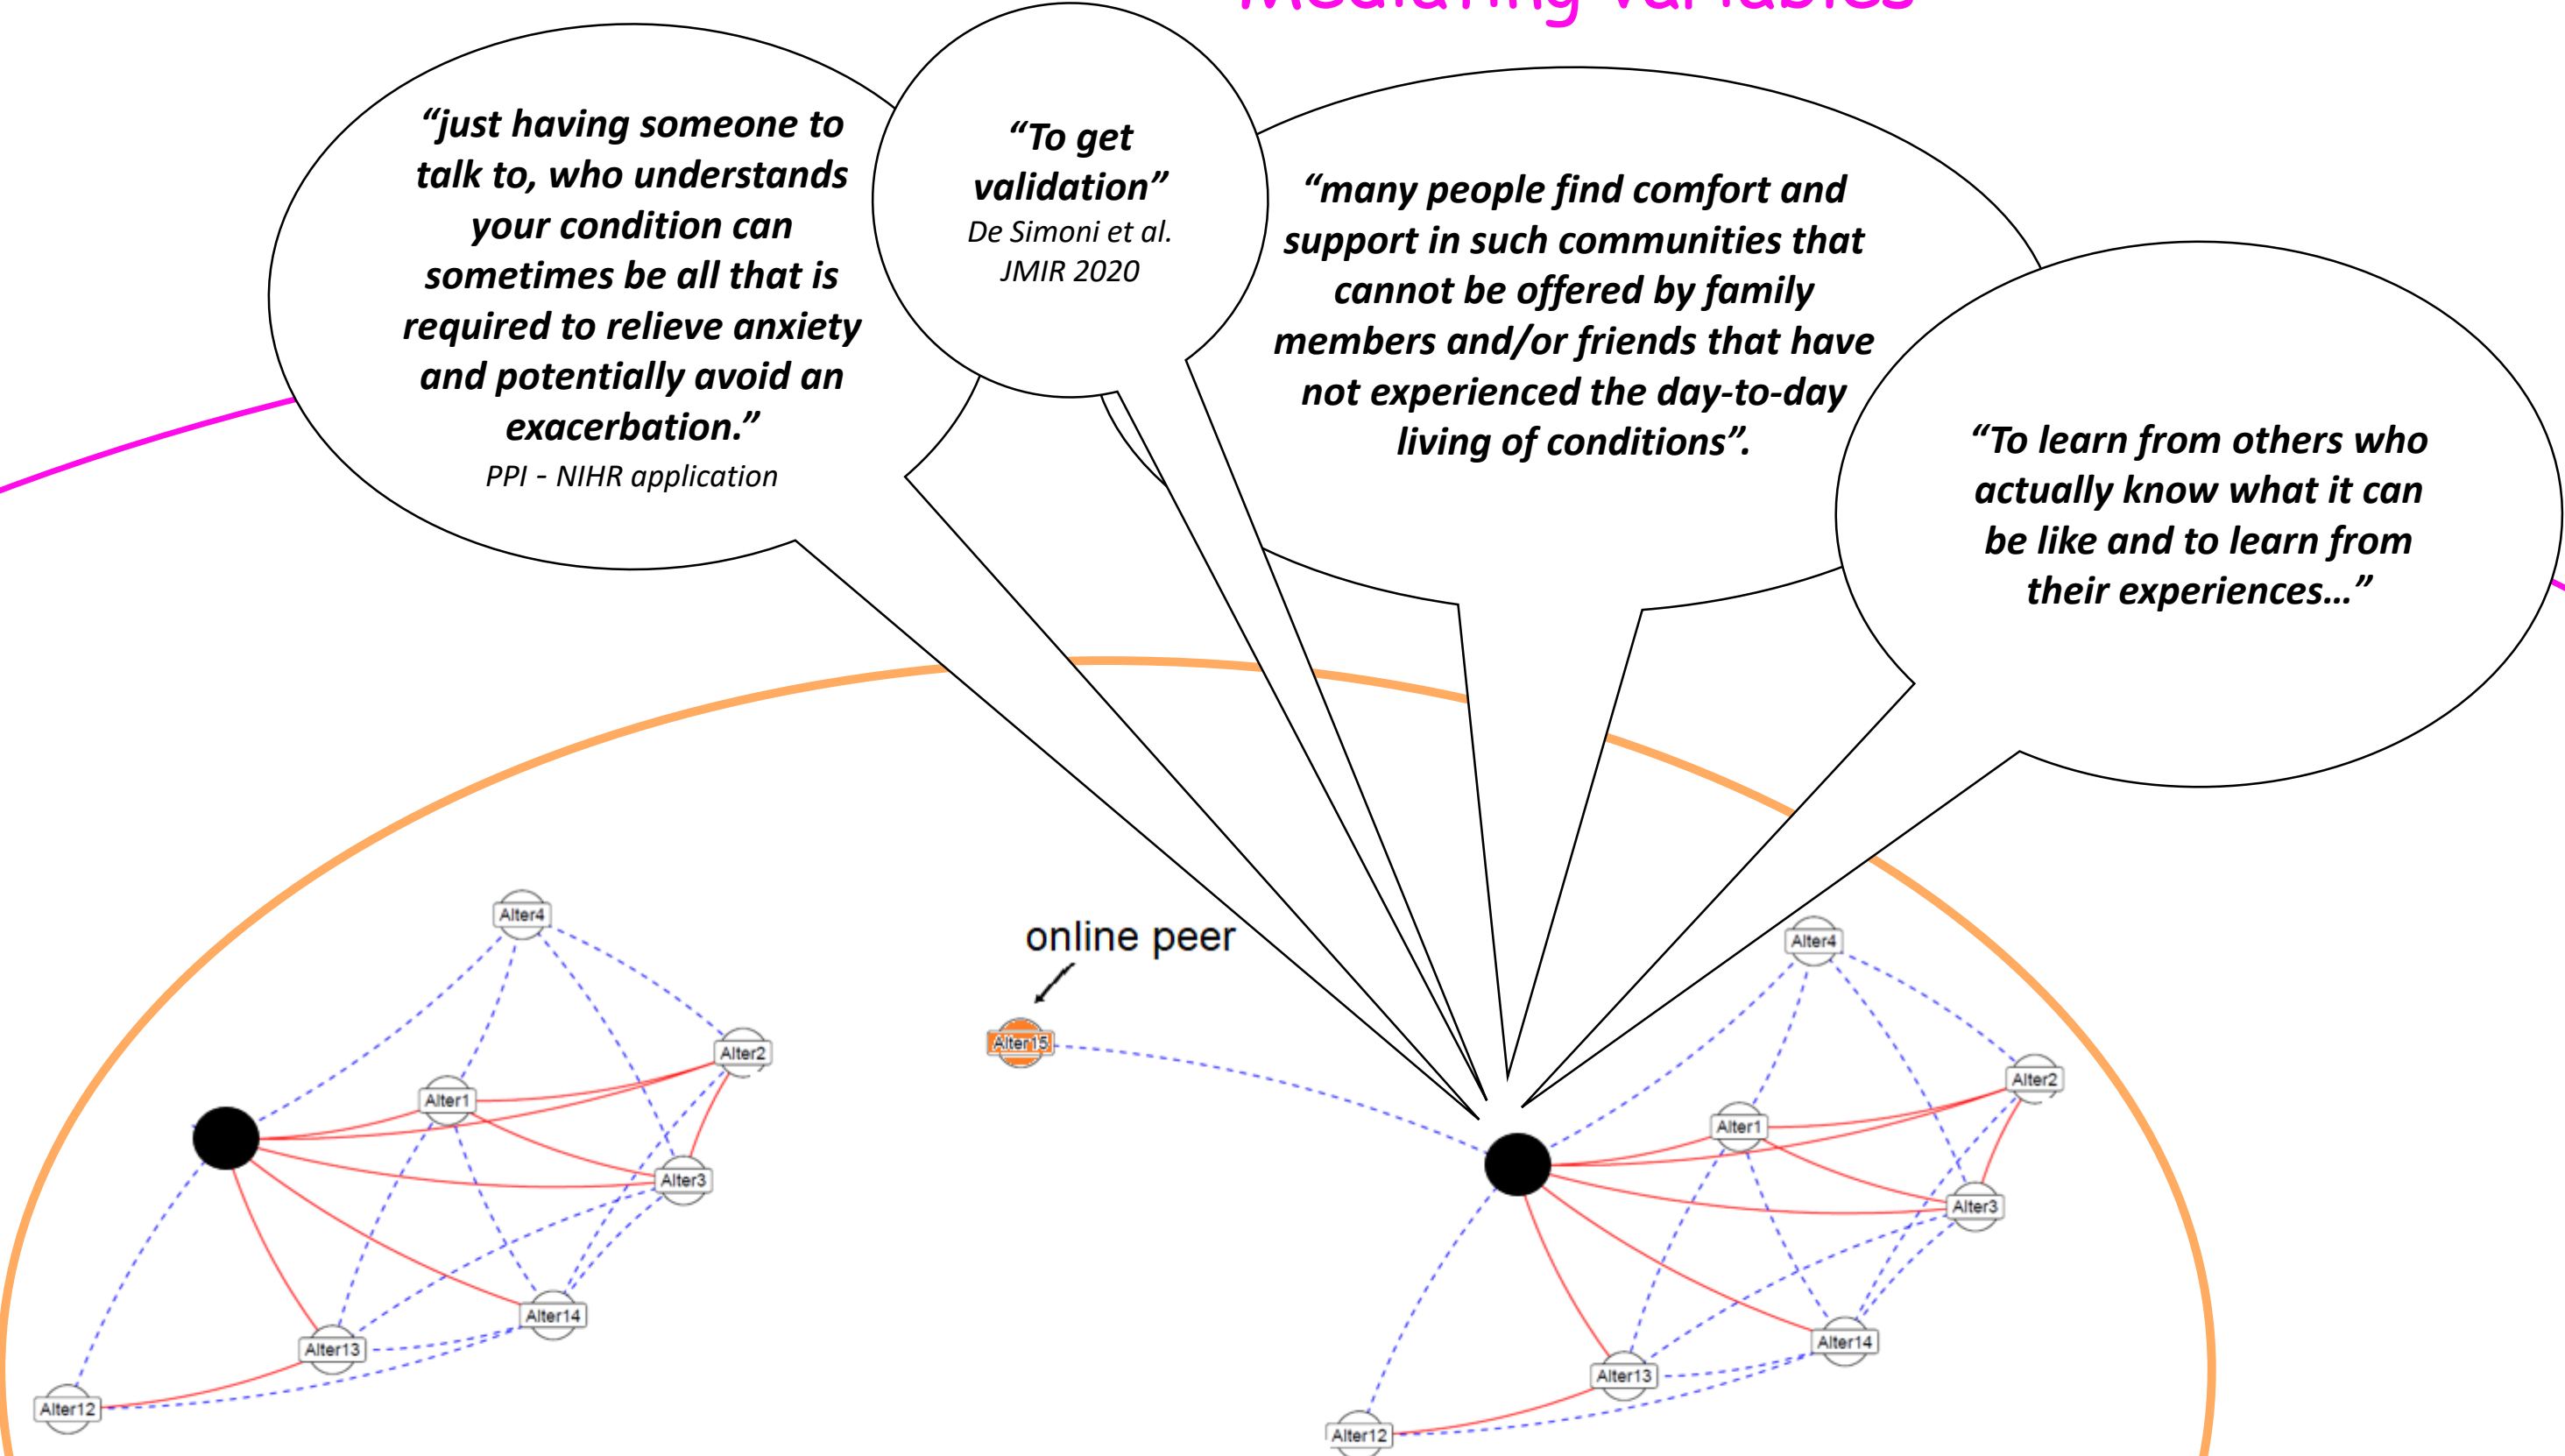

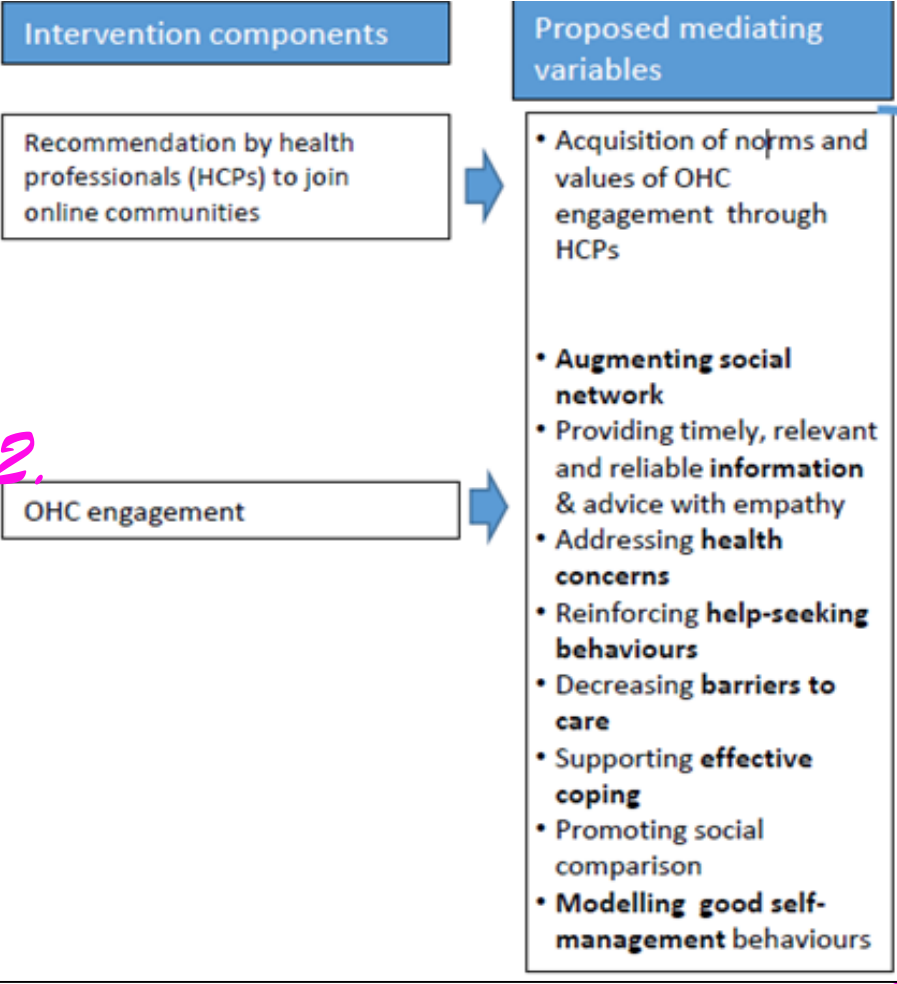

‘A connected asthma system’ that supports people throughout their ‘asthma journey’

AD HOC – developing self-management skills

Mediating variables

Trial outcomes

Intervention

Tool for quantitative social network assessment

network size	density	constraint	effect size
7	0.7	46.7	4.0
8	0.5	40.4	5.2

Study outcomes

ACT Score

- GAD-7
- PHQ-8
- Self-efficacy
- Asthma Quality of Life Questionnaire (AQLQ)
- EQ5D-5L
- Primary and secondary care service use
- Number of exacerbations
- Asthma medication adherence
- Social mapping tool measures
- OHC engagement metrics data: amount of engagement (number of days, hours/day etc.), number of logins, number of likes, time spent on pages, votes on polls, pageviews.
